

# Claydata's EMR Package

- Don't miss a thing - avoid guesswork with éSummary, granting full access anywhere to patient information
- Use simple and customisable medical forms - deploy forms at your fingertips that allow accurate measurement of practice trends while contributing to CME and professional registration
- Streamline your medical care - integrate labs, scripts, medication management and reports into your patient care procedures
- Grant your patients secure and selective access to their records - PuttyMe engages the patient securely and allows them to view medical information online, e.g. scripts, bookings, and accounts

## Package description

The EMR Package represents the pinnacle of Claydata's achievement - a fully-fledged, internationally accredited electronic medical records (EMR) solution.

At the forefront of Australia's transition to e-health, the Claydata team have forged a unique and powerful set of tools that help medical practitioners and practice groups of all kinds and sizes optimise their patient care, reduce administrative burdens, and leverage the latest in health information technology.

With this package, you get all the tools included in the Communications, Document Management, and Front Desk Packages, with the addition of specialist e-health applications and gateways.

## Included in this package
